Figure 1 presents the Dolan-Moré CPU time performance profiles of ASCALCG and SCALCG conjugate gradient algorithms for large-scale unconstrained optimization. The ASCALCG – the accelerated BFGS preconditioned conjugate gradient algorithm is an acceleration of the SCALCG algorithm.

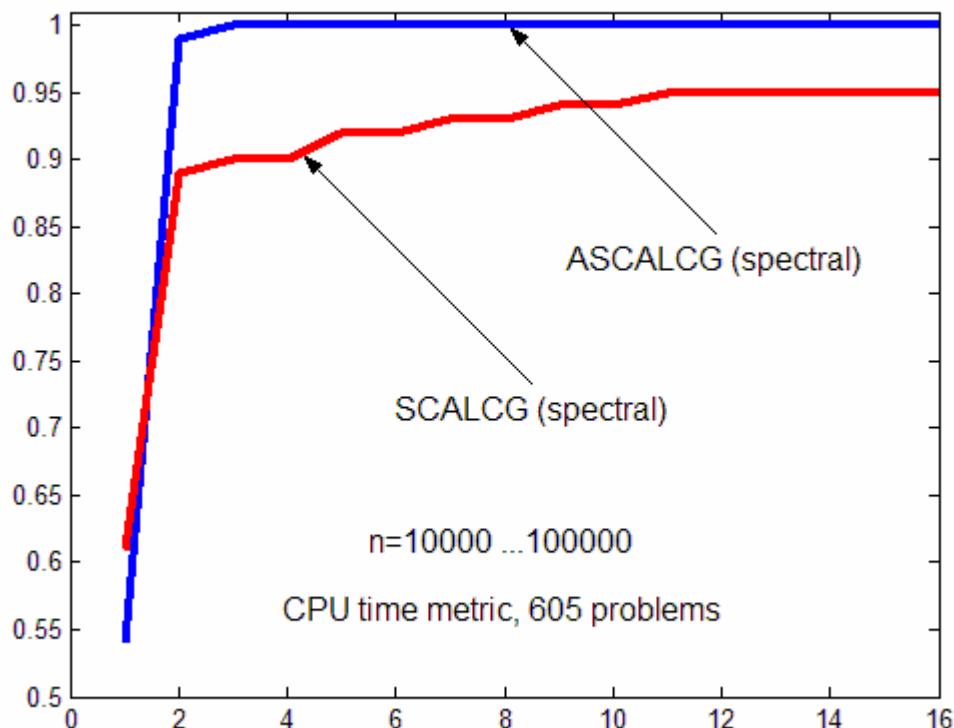

Fig. 1. ASCALCG (spectral) versus SCALCG (spectral).
Number of variables: $n \in [10000, 100000]$.

```
nexptot= 750      nexp= 605
Total Number of iterations for ASCALCG =    215828
Total Number of iterations for SCALCG   =   321440

Total Number of function evaluations for ASCALCG =   398163
Total Number of function evaluations for SCALCG   = 2006594

Total Time (centeseeconds)  for ASCALCG =  1506673
Total Time (centeseeconds)  for SCALCG   = 2166236
```
